

Supplementary Figure 1. Principal Component 1 (PC1) correlated with precipitation and climate. (A) We analyzed mean PC1 by species as a function of precipitation during the 30 days prior to collection of each species' holotype (r=-0.37, p=0.0087). (B) We analyzed mean PC1 by species as a function of Köppen Climate Groups based on the location the holotype was found (p=0.03174).
